DETAILED ACTION

Response to Arguments

Applicant's arguments filed 8/29/07 have been fully considered but they are not persuasive.

The applicant argues that neither Wood or Grauch teach the limitation of wherein content continues to be repeatedly scheduled until it is viewed, and wherein when the content is viewed, corresponding degree-of-exposure data is updated. Wood (paragraph 67) teaches the idea that a program, such as CNN news, would be repeatedly scheduled to be recorded, and as the content exposure is updated when it is watched (Wood: paragraph 53) this is interpreted as meeting the limitation added in the amendment.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wood in view of Grauch.

Referring to claim 1, Wood discloses a content-exhibition control apparatus for exhibiting content in another apparatus (figs. 8 and 9; [0049]; [0050]),

Application/Control Number: 09/916,002

Art Unit: 2623

comprising: generating means for generating degree-of-exposure control data used to control the degree of exposure of the content; exhibition control means for controlling the exhibition of the content recorded in the another apparatus according to the degree- of-exposure control data generated by the generating means; (by clicking a name in the channel guide, a dot is placed on the screen and the program is recorded, thereby controlling the 'degree-of-exposure' [0049]; fig. 8; by specifying all shows in a series to be recorded, a double dot is displayed and also controls the 'degree-of-exposure'; fig. 9; [0050]);

obtaining means for obtaining the state data of the content sent from the another apparatus (the "state data" is reflective of whether a single program or all shows in a series are recorded; figs. 8 and 9; [0049]; [0050]),

wherein the generating means generates the degree-of exposure control data according to the state data of the content, obtained by the obtaining means (the 'degree-of- exposure' is dependent on the number of dots displayed, which is displayed according the 'state data' or whether the show or series is to be recorded figs. 8 and 9; [0049]; [0050]);

storing means (104) for storing user information which includes user preferences with the state data (a user criteria indicates whether a single program or all shows in a series are recorded, wherein the user criteria of preferences is stored) the content collected from a hard-disk recorder in a customer database (fig. 4, el. 403; [0042-0044]; [0049-0050]); and

Application/Control Number: 09/916,002

Art Unit: 2623

feedback means for feeding back said degree of exposure of the content (paragraph 53, lines 6-14); and wherein content continues to be repeatedly scheduled until it is viewed (paragraph 67), and wherein when the content is viewed, corresponding degree-of-exposure data is updated (paragraph 53).

Wood does not disclose an apparatus wherein an audience rating and an advertisement effect are calculated as a function of the feedback data.

In an analogous art, Grauch teaches an apparatus wherein an audience rating and an advertisement effect are calculated as a function of the feedback data (column 20, lines 37-54; column 21, lines 29-38).

At the time of the invention it would have been obvious for one of ordinary skill in the art to add the advertisement rating taught by Grauch to the apparatus disclosed by Wood. The motivation would have been to enable the advertisers to track which advertisements were actually being viewed (Grauch: column 21, lines 29-38).

Claim 3 is rejected on the same grounds as claim 1.

Referring to claim 2, Wood discloses the degree-of-exposure control data includes a content ID (name of the program; figs. 8 and 9; [0049]; [0050]),

an exposure type (recorded or not recorded figs. 8 and 9; [0049]; [0050]),

and an exposure value (single or double dot figs. 8 and 9; [0049]; [0050]);

and the state data of the content includes a viewing condition and a degree-of-exposure condition (the 'viewing condition' is whether the program will be recorded and available for future viewing', the display of dots figs. 8 and 9 is the 'degree-of-exposure'

Page 5

Art Unit: 2623

of the 'state data,' or whether or not the program will be/has been recorded'; [0049]; [0050]).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Justin E. Shepard whose telephone number is (571) 272-5967. The examiner can normally be reached on 7:30-5 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Kelley can be reached on (571) 272-7331. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
